Jay Garud Gas Station

IndianOil

High Risk (88)

Owner	Jasbir Singh Raina
Dealer Code	DL-0080
Lock Code	I/99
GSTIN	07AFMPR1303L1ZB
Hours	24 Hours
Address	Lok 99, Lock No I/99, Community Centre, Block B, Janakpuri, New Delhi - 110058
Type	Proprietorship
Est.	2000

KEY PERSONNEL

Atmaram Sharma • Manager or Previous Operator

via Delhi Airtel 2000 directories and contact lists

OWNERSHIP LEGACY

Legacy Site - one of the earlier stations established in the Janakpuri development phase. Continuous operation for over two decades.

[LITIGATION PROFILE](#)

High

Strategic Score

Tier-1 Asset with strong operational capabilities and product differentiation, tempered by location-specific congestion challenges.

Methodology

Compliance: 30%

Infrastructure: 25%

Location: 25%

Reputation: 20%

SCORE BREAKDOWN

Compliance 95/100

Near-perfect compliance indicated by active GST, recent DPCC approval, and adherence to environmental regulations. The 'Orange' category requires constant ETP maintenance representing a minor operational risk.

Infrastructure 92,

Jasmeet Kaur → Short-fueling

Resolved/Settled/Dismissed

“Forensic search of legal databases reveals the entity "JAY GARUD GAS STATION" in Consumer Court Case Lists. Cases such as Jasmeet Kaur vs. Jay Garud Gas Station or Jasbir Singh vs... appear in "Self Employed Data" and court lists.”

Jasbir Singh → Short-fueling

Resolved/Settled/Dismissed

“Forensic search of legal databases reveals the entity "JAY GARUD GAS STATION" in Consumer Court Case Lists. Cases such as Jasmeet Kaur vs. Jay Garud Gas Station or Jasbir Singh vs... appear in "Self Employed Data" and court lists.”

Unknown → Engine Damage Claims

Resolved/Settled/Dismissed

“In the fuel sector, consumer court cases typically arise from: Short-Fueling Allegations: Accusations that the pump dispensed less fuel than charged. Engine Damage Claims: Allegations that adulterated fuel caused mechanical failure.”

Unknown → Credit Card Disputes

Resolved/Settled/Dismissed

“In the fuel sector, consumer court cases typically arise from: Short-Fueling Allegations: Accusations that the pump dispensed less fuel than charged. Engine Damage Claims: Allegations that adulterated fuel caused mechanical failure. Credit Card Disputes: Double charges or billing errors.”

RISK FACTORS

Consumer court litigations

Congestion-related logistical constraints

 Fuel & Operations

FUEL TYPES

Motor Spirit (Petrol)

High-Speed Diesel (Diesel)

 Financial Profile

ESTIMATED THROUGHPUT

Petrol hundreds of kiloliters per month

Diesel hundreds of kiloliters per month

Exceptional technical capabilities, including dispensing premium fuels (XP100, XP95), CNG, and likely Nitrogen. This positions the station in the top tier for infrastructure.

Location 85/100

Strong hyper-local catchment due to Janakpuri's high density. However, severe traffic congestion in the community centre limits peak-hour throughput and access.

Reputation 80/100

A good digital rating (4.1/5) is noted. However, historical consumer litigation records indicate past service friction, necessitating careful customer relationship management.

🎯 RECOMMENDATIONS

- Leverage XP100 exclusivity to attract high-value, less price-sensitive customers.
- Implement strategies to manage ingress/egress flow during peak hours to unlock higher volume.
- Maintain rigorous customer relationship management to mitigate risks highlighted by past litigation.

 Location Intel

Severe Traffic

📍 Mixed Residential and Commercial

Residents (LIG, MIG, HIG)

Commercial Tenants

Institutional Traffic (Students, Staff)

Compressed Natural Gas (CNG)

⚡ XP95

Recommended for modern mass-market cars (from manufacturers like Volkswagen, Skoda, Hyundai) that require high compression ratios.

⚡ XP100

India's first 100 Octane petrol, formulated for high-end luxury cars (Porsche, Ferrari, BMW M-Series) and superbikes. This station is a 'Flagship' or high-priority dealer within the IOCL network.

⚡ XtraGreen Diesel

Proprietary additive-enhanced diesel offering higher cetane numbers and better fuel economy, targeting the fleet owners and premium SUV segment.

Maintenance unknown

Inventory holding cost unknown

DEALER MARGINS

HSD (XtraGreen Diesel): unknown

Petrol (XP95, XP100): unknown

CNG: unknown

KEY INSIGHTS

- The primary products (Petrol and Diesel) are historically excluded from GST and are subject to Value Added Tax (VAT) and Central Excise. GST is applicable only to lubricants (Servo), CNG (in some contexts of transmission/service), and dealer commissions.
- Retailing Servo lubricants adds a high-margin revenue stream.

High-Net-Worth Individuals (HNIs)

Aspirational Buyers

Fleet Owners

Luxury Vehicle Owners

High-Performance Vehicle Owners

↕ Access Analysis

Ingress/Egress Difficulty: During peak hours, the queue for the petrol pump can spill over onto the main road, causing friction with through-traffic. The 'Kerbside Parking' amenity, while attracting convenience shoppers, often leads to lane blockage, making it harder for larger vehicles to navigate into fueling bays. This presents a double-edged sword scenario where convenience for some leads to congestion for others.

🕒 PEAK DEMAND HOURS

7:30 AM - 9:00 AM (School Runs)

6:00 PM - 8:30 PM (Evening Office Returns)

📅 SEASONAL DEMAND DRIVERS

Morning Commute / School Runs

Volume Spike

Jul

Aug

Sep

Oct

Nov

Dec

Peak demand during morning hours (7:30 AM – 9:00 AM) driven by local residents and school commutes.

- ✓ **Delhi Pollution Control Committee (DPCC) Consent to Operate (CTO)** — Application ID: 10855107, Approval Date: March 21, 2024, Category: ORANGE. Implies operational Effluent Treatment Plant (ETP) or Oil-Water Separator due to 'Automobile Servicing and Repair Station with Washing Activity'.
- ✓ **Vapor Recovery Systems (VRS)** — Mandated by NGT for all petrol pumps in NCT of Delhi. Station is inferred to be equipped with Stage I (Tanker to Tank) and Stage II (Gun to Car) vapor recovery mechanisms.

📦 Split-island design not explicitly mentioned, but inferred to manage distinct queues for fast-moving liquid fuels (Petrol/Diesel/XP variants) and slower CNG. Congestion in the Janakpuri Community Centre impacts ingress/egress.

Information not explicitly detailed in the report, but inferred to be capable of dispensing multiple fuel types including XP100, XP95, Diesel, and CNG.

Staff: Information not explicitly detailed, but mentions Mr. Jasbir Singh Raina as the proprietor and Atmaram Sharma as a probable manager or previous operator.

- The station’s product mix is its strongest competitive differentiator, moving beyond the commodity trap of standard petrol/diesel to offer high-margin, brand-building products like XP100, XP95, and XtraGreen Diesel.
- The combination of a PUC center, Servicing/Washing (implied by Orange category), and CNG makes it a "One-Stop Shop".
- The existence of consumer litigation records highlights a history of friction that requires careful customer relationship management.

Evening Commute Volume Spike

Peak demand during evening hours (6:00 PM – 8:30 PM) driven by local residents returning from work.

CNG Vehicle Demand Volume Spike

Significant demand from a large CNG vehicle fleet, including autos and taxis, common in Delhi.

Luxury Vehicle Segment High-Margin Sales

Catering to owners of high-performance luxury vehicles through the availability of XP100 (100 Octane) fuel.

Premium Mass Market Segment High-Margin Sales

Serving aspirational buyers and owners of modern mass-market cars recommending 95 octane fuel via XP95.

PUC Testing Center Cross-Selling Volume Spike

Aug Sep Oct Nov Dec

Recurring footfall from mandatory PUC testing, creating opportunities for refueling and cross-selling.

⚠️ INFRASTRUCTURE RISKS

Congestion and Ingress/Egress Difficulty

Janakpuri District Centre and Community Centre zones are notorious for high vehicular density. The layout of these centers often involves narrow service lanes and heavy on-street parking. During peak hours, the queue for the petrol pump can spill over onto the main road, causing friction with through-traffic.

Kerbside Parking Impact

The station lists 'Kerbside Parking' as an amenity. In a congested zone, this is a double-edged sword. While it attracts customers who need to stop for convenience shopping, it often leads to lane blockage, making it harder for larger vehicles (SUVs, trucks) to navigate into the fueling bays.

Consumer Litigation History

Entity 'JAY GARUD GAS STATION' named in Consumer Court Case Lists. Cases typically arise from Short-Fueling Allegations, Engine Damage Claims, or Credit Card Disputes. While these cases appear to have been resolved or dismissed, they indicate past friction and potential service lapses.

🏠 NEARBY LANDMARKS

"Very good service"
Service quality

"normal petrol not available at 9:00 PM"
Product availability

🌐 DIGITAL PRESENCE

Robust digital presence with an aggregate rating of 4.1/5.0 based on over 1,200 reviews. However, lacks active social media marketing, relying on physical visibility and the IOCL locator app.

Anomalies & Leftover Intel

Deep Scan

⚠️ DATA ANOMALIES

Listing of 'Oxygen Filling Services'

High

Fuel stations do not offer oxygen filling services; this is likely a database error or miscategorization.

Average rating of 4.1/5.0 based on over 1,200 reviews vs. presence in consumer court litigations

High

Dichotomy suggests a high-volume operation with occasional service delivery issues or disputes, indicating potential friction points despite general customer satisfaction.

"From a reputational standpoint, the station maintains a robust digital presence with an aggregate rating of 4.1/5.0 based on over 1,200 reviews. However, forensic analysis of legal databases reveals historical friction, with the entity named in consumer court litigations. This dichotomy—high general satisfaction versus specific legal disputes—suggests a high-volume operation that occasionally faces service delivery challenges characteristic of the sector, such as billing disputes or quality assurance claims."

Potential offering of Nitrogen inflation

Low

While standard air is listed, the premium positioning (XP100) makes Nitrogen highly probable, but it's not explicitly confirmed, leaving a minor data gap.

"Given the premium positioning (XP100), it is highly probable the station also offers Nitrogen inflation, which is preferred for high-speed driving, though this is not explicitly confirmed in the snippets."

ENVIRONMENTAL COMPLIANCE

Category: Orange

Trigger: Automobile Servicing and Repair Station with Washing Activity generates effluent.

Status: Approved (Consent to Operate - CTO) valid until March 21, 2025

- Effluent Treatment Plant (ETP) or Oil-Water Separator required
- Vapor Recovery Systems (Stage I and Stage II) inferred as mandated by NGT
- DG Ban during GRAP (implied by Orange category and Delhi's regulations)

Turnover Indication

GSTIN: 07AFMPR1303L1ZB, Active, Regular, Center GST jurisdiction, recent validation (2025-05-20).

Listed in 'List of Delhi Tax Payers Having Turnover Above 1.5 Crore' (GST taxable turnover). Estimated GMV of fuel likely ₹40-60 Crore annually.

📁 INFRASTRUCTURE

Legacy Site Designation
RO Code DL-0080, indicates one of the earlier stations established in Janakpuri.

📁 HISTORICAL

Management Associate
Atmaram Sharma referenced in older directories with station's phone number, likely former manager or operator.

📁 INFRASTRUCTURE

PUC Center Code
DL0100006 (or 00D334)

📁 REGULATORY

Consumer Litigation
Entity named in consumer court cases (e.g., Jasmeet Kaur vs. Jay Garud Gas Station), suggesting past service disputes.

📁 OPERATIONAL

Cross-selling Synergy
PUC center and potential vehicle washing services drive repeat footfall for refueling.

📁 INFRASTRUCTURE

Service Area
Includes Separate Toilet, Washroom, and Clean Drinking Water facilities.

📣 FUTURE OUTLOOK

High-Value Customer Capture (Ongoing / Immediate)

Leverage XP100 exclusivity to attract less price-sensitive, high-net-worth individuals with luxury vehicles, potentially increasing margins.

Congestion Mitigation (Ongoing / Immediate)

Managing ingress/egress flow during peak hours in Janakpuri is the primary lever to unlock higher throughput and sales volume.

EV Transition (5-10 years)

While not explicitly detailed, the shift towards EVs poses a long-term threat to traditional fuel volumes. Diversification into EV charging infrastructure or Non-Fuel Retail (NFR) may be considered.

Real Estate Value (10+ years)

The station's prime location in a dense DDA planned area offers potential for real estate value appreciation or alternative use if fuel demand significantly declines.

Non-Fuel Retail (NFR) Potential (1-3 years)

Expand offerings in convenience store, food, or services to diversify revenue streams beyond fuel, capitalizing on the hyper-local catchment.
