Demo #3 · Progressive Extraction

Jai Shree Ganesh Filling Station

Bharat Petroleum Corporation Limited (BPCL)

High Risk (75)

Owner	Sudesh Yadav
Dealer Code	—
GSTIN	07AAFFJ4471P1ZU
Hours	24 Hours
Address	Khasra No. 66/14 & 66/15, Village Alipur, National Highway 44 (NH-44), Delhi
Type	Proprietorship
Est.	2002

KEY PERSONNEL

Sudesh Yadav • Proprietor

via Entity Structure Analysis

OWNERSHIP LEGACY

Operates under a Proprietorship, implying unlimited liability for the owner. Typical of legacy allotments from the early 2000s.

LITIGATION PROFILE

Low

Strategic Score

Mature asset with strong location, but facing operational and technological headwinds.

Methodology

Geostrategic Location: 25%

Operational Efficiency: 25%

Market Position: 15%

Financial Viability: 15%

Technology & Future-Proofing: 10%

Regulatory Compliance: 10%

SCORE BREAKDOWN

Geostrategic Location

90/100

Prime location on NH-44 with diverse demand drivers (freight, industrial, leisure, events).

Operational Efficiency

65/100

Customer Reviews → Quantity Anxiety

Perception issue, requires visible calibration checks

"Reviews questioning the quantity of fuel dispensed strike at the core of the business's integrity."

Customer Reviews → Fuel Availability Issues

Stock-outs reported

"A review explicitly mentions "normal petrol not available at 9:00 PM"."

RISK FACTORS

Staff Behavior

Fuel Availability

RRTS Construction Disruption

EV Transition Threat

Competition

High throughput potential undermined by persistent issues with staff behavior, service quality, and reported fuel availability.

Market Position **75/100**

Strong presence in a competitive cluster, but faces direct competition from intra-brand and inter-brand rivals.

Financial Viability **80/100**

Solid revenue potential based on volume, but margin pressure and high OPEX (especially labor) are noted.

Technology & Future-Proofing **55/100**

Significant risk from EV transition and RRTS construction; lacks current EV charging infrastructure.

Regulatory Compliance **85/100**

Appears compliant with PESO, environmental, and GST norms; labor law compliance carries risk due to staffing model.

📌 RECOMMENDATIONS

- Implement a comprehensive customer service training program to address staff behavior and improve service quality.
- Investigate and resolve reported issues of fuel availability and dispensing accuracy to restore customer trust.
- Develop a strategy for integrating EV charging infrastructure to mitigate future technology risks.
- Explore Non-Fuel Retail (NFR) opportunities, such as a QSR drive-thru or convenience store, to diversify revenue and leverage real estate value.
- Actively manage engagement with NCRTC regarding the RRTS construction to ensure continuous access and minimize sales disruption.

- > Conduct a review of the staffing model to ensure compliance with labor laws and improve retention, potentially through better wages or benefits.
- > Evaluate the potential for enhanced loyalty programs or credit facilities for commercial fleets to compete more effectively.

Fuel & Operations

FUEL TYPES

High-Speed Diesel (HSD)

Primary revenue driver for long-haul trucking and inter-state buses on NH-44, with demand peaking late-night and early-morning.

Motor Spirit (Petrol)

Serves commuter traffic, 2-wheelers, and leisure visitors (e.g., to Splash Water Park).

CNG

Critical 24-hour service for commercial vehicles (SCVs like Tata Ace, Mahindra Bolero Maxx) operating between Narela's factories and Delhi's markets, essential for tight turnaround times.

× Automation

× EV Charging

No visible EV Charging Infrastructure currently, but the location near Splash Water Park is ideal for future installation, potentially partnering with BPCL's 'E-Drive' or third-party providers.

AMENITIES

Pollution Under Control (PUC) center

Air

Wedding Guests

General Commuters

↕ Access Analysis

The station's ingress/egress is significantly impacted by the ongoing construction of the Delhi-Panipat RRTS corridor along NH-44. Diversions, barricading, and potential obstruction of access points pose a severe risk to customer access and sales volumes. The station operates on a crucial service road on NH-44 which could be compromised. Furthermore, being a large format highway outlet, the split-island design attempts to manage the high volume of heavy commercial vehicles and passenger cars, but

🏠 NON-FUEL RETAIL

Fuel at Call

Lubricants (SERVO)

Fleet cards (BPCL SmartFleet)

Xtrapower

Washing

PUC

Potential for Quick Service Restaurant (QSR) drive-thru or convenience store development due to location and land value.

🛡️ SAFETY & COMPLIANCE

- ✓ **Form XIV License (PESO)** — Authorizes the storage and dispensing of petroleum products. Continued operation implies a valid license. Requires re-approval for new installations (CNG cascades, EV chargers).
- ✓ **Vapor Recovery Systems (VRS)** — Mandated to have functional Stage I (tanker-to-tank) and Stage II (nozzle-to-vehicle) VRS to capture benzene emissions. Required for operation in Delhi.
- ✓ **DPCC & NGT Environmental Compliance** — Must comply with norms for waste management (oily sludge, used containers). Subject to restrictions on Diesel Generator (DG) use during GRAP invocation in winter.

📋 Likely features a "split-island" design: Outer Islands dedicated to High-Speed Diesel (HSD) with high-flow nozzles, and Inner Islands dedicated to Motor Spirit (Petrol) for passenger vehicles, separating heavy traffic.

Likely operates 4-6 Multi-Product Dispensers (MPDs) for liquid fuels. High-flow nozzles (40-60 liters per minute) for HSD to minimize turnaround time for trucks.

Electricity ₹3.0-5.0 Lakhs/month

Maintenance ₹1.0 Lakh/month

Inventory Holding Cost Substantial

DEALER MARGINS

HSD: ₹2.00-2.50/liter

MS: ₹3.00-3.50/liter

CNG: ₹4.00-5.50/Kg

KEY INSIGHTS

- Dealer commissions are regulated by Oil Marketing Companies (OMCs).
- HSD Margin: ~₹2.00-2.50/liter.
- MS Margin: ~₹3.00-3.50/liter.
- CNG Margin: ~₹4.00-5.50/kg (depending on land ownership model).
- Revenue estimate is for Gross Profit, not total revenue.
- Net Income is estimated after OPEX.
- Asset valuation is based on a 4x-5x NOI multiple and excludes land value.
- There is potential for Non-Fuel Retail (NFR) to generate rental income.
- High staff turnover and poor morale impacting customer experience and potentially leading to reliance on casual labor to bypass statutory costs.
- Potential for stock-outs impacting revenue and customer trust.

the overall traffic friction on NH-44 is severe, especially during peak hours.

🕒 PEAK DEMAND HOURS

Late Night

Early Morning

Morning Rush (7:30 AM - 9:00 AM for school runs)

📅 SEASONAL DEMAND DRIVERS

Wedding Season

Diesel DG Sets Spike, Petrol/CNG for Guest Vehicles

Oct

Nov

Dec

Jan

Feb

Dense concentration of banquet halls and farmhouses in Alipur, such as Carnival Pearl Grand, generating localized spikes in energy demand for events and guest transportation.

Leisure Traffic (Water Park)

Petrol/CNG Volume Spike

Apr

May

Jun

Jul

Major traffic generator Splash Water Park attracts families and groups from Delhi and surrounding towns, creating daytime demand.

School Runs

Petrol/CNG Volume Spike

All Year (during academic session)

Specifically mentioned peak demand between 7:30 AM - 9:00 AM, likely from parents dropping off/picking up children from schools in the vicinity.

Commercial Logistics (NH-44)

High-Speed Diesel (HSD) and CNG Volume Spike

Staff: Estimated 12-15 Forecourt Attendants (DSMs), 6-8 CNG Fillers, 3-4

- Supervisors/Cashiers, and 3-4 Security personnel, operating on a 3-shift (8-hour) or 2-shift (12-hour) system to maintain 24/7 operations.

- Customer reviews indicate concerns about fuel quantity dispensed.

- High OPEX baseline due to Delhi's minimum wage laws compared to neighboring states.

Corridor)

All Year

Primary spine connecting NCR to northern states, heavily skewed towards Heavy Commercial Vehicles (HCVs) and inter-state logistics. Demand peaks late-night/early-morning for long-haul trucks exiting Delhi.

Industrial Goods Movement (Narela/SGTN)

CNG Volume Spike

All Year

Small Commercial Vehicles (SCVs) like Tata Ace and Mahindra Bolero Maxx, universally CNG-powered, used for ferrying goods between Narela's factories and Delhi's markets, requiring 24-hour CNG availability for tight turnaround times.

⚠️ INFRASTRUCTURE RISKS

Delhi-Panipat RRTS Construction

Ongoing construction of the Delhi-Panipat Regional Rapid Transit System (RRTS) corridor along NH-44. Potential for physical disruption including service road diversions and barricading, which could obstruct station access or divert traffic. Duration: 12-24 months. Implications: Significant potential drop in sales volumes (30-50%) if access is compromised.

EV Transition

Delhi's aggressive push for EV adoption, particularly in the commercial fleet (delivery vans, autos), poses an existential threat to the CNG revenue stream over the next 5-10 years. The station currently lacks EV Charging Infrastructure.

Winter Smog (GRAP)

During winter months, Graded Response Action Plan (GRAP) may ban or restrict the use of Diesel Generators (DG). This forces reliance on grid power or gas-based generators for 24/7 operations during power cuts, increasing operational costs.

NEARBY LANDMARKS

- Splash Water Park
- Carnival Pearl Grand (Banquet Hall)
- Narela Industrial Area
- Sanjay Gandhi Transport Nagar (SGTN)

Justdial

No specific data provided for Justdial, but implied to have fewer reviews than Google Maps based on comparative analysis.

Competitor Platforms (Nem Chand Tara Chand,

Comparative analysis shows Nem Chand Tara Chand with 281 reviews (3.9 rating) and Harjeet Filling

Divides trade with Nem Chand Tara Chand on BPCL brand, competes with Indian Oil for overall fleet traffic, and with Green Enviro for CNG/commercial vehicle segment. Also captures seasonal demand from wedding venues and leisure traffic.

COMPARATIVE METRICS

Metric	Subject	Nem Chand Tara Chand	Harjeet Filling Station	Green Enviro Pump Station
Brand	BPCL	BPCL	Indian Oil	CNG/Eco
Distance	Anchor (0m)	530m South	~1-2km Radius	Alipur
CNG Status	24 Hours	24 Hours	Yes	Yes
User Rating	3.9/5.0 (930 Reviews)	3.9 (281 Reviews)	Mixed Ratings	3.6 (393 Reviews)
Primary Customer Type	Heavy Commercial Vehicles (HCVs), Local industrial fleet (CNG), Wedding/Leisure traffic	HCVs, BPCL Fleet Card Users	HCVs, Indian Oil XTRAPOWER Users	Auto-rickshaws, Taxis, Commercial Light Goods Vehicles
Key Weakness	Staff Behavior, Service Consistency, Fuel Availability Issues	General Service Consistency	Mixed Ratings	Likely focused on specific segments

> OUR MOAT

Geostrategic location on NH-44, dual-fuel capability (BPCL fuel & 24-hour CNG), proximity to industrial areas, wedding venues, and leisure attractions.

Harjeet Filling Station, Green Enviro Pump Station)

Station with mixed/low ratings. Green Enviro Pump Station has 393 reviews.

POSITIVE

- 24-hour CNG availability
- Strategic location on NH-44
- High throughput potential
- Serving commercial fleet traffic
- Capturing demand from wedding venues and leisure traffic

CONCERNS

- Rude staff behavior
- Unprofessional customer service
- Concerns about fuel availability (normal petrol)
- Anxiety over fuel quantity dispensed
- Impact of RRTS construction

NOTABLE REVIEWS

- "normal petrol not available at 9:00 PM"
Fuel Availability
- "Very good service"
Service Quality
- "Getting crowded and long queues. Specially for CNG users"
Queues and Congestion
- "rude staff"

Staff Behavior

"unprofessional"

Staff Behavior

"lack of manners"

Staff Behavior

"quantity of fuel dispensed"

Fuel Quantity

DIGITAL PRESENCE

The station has a significant digital presence with over 930 reviews on Google Maps, indicating high visibility and customer engagement. However, the sentiment analysis of these reviews highlights chronic challenges in human resource management, specifically regarding staff behavior and service efficiency, impacting the overall customer experience.

Anomalies & Leftover Intel

Deep Scan

DATA ANOMALIES

Oxygen Filling Services

High

Unusual service offering for a fuel station; likely a database error or a legacy COVID-era offering that is no longer active.

"The "Oxygen" Anomaly: One data source mentions "Oxygen Filling Services". This is highly unusual for a retail fuel outlet. It is assessed to be either a database error conflating the entity with an industrial gas supplier or a remnant of a temporary facility established during the COVID-19 pandemic (2020-2021) when many industrial units in the Narela/Alipur belt pivoted to oxygen handling. For the purpose of current asset valuation, this should be treated as a non-core or legacy data point."

Normal petrol not available at 9:00 PM

High

Indicates potential inventory management issues or a deliberate strategy to push higher-margin branded fuel, leading to customer dissatisfaction.

"The "Availability" Crisis: A review explicitly mentions "normal petrol not available at 9:00 PM". In fuel retail, stock-outs are a critical failure. They suggest either poor inventory planning (working capital constraints) or a deliberate strategy to push higher-margin "Speed" (branded petrol) by claiming normal fuel is out of stock—a practice that irritates customers and damages trust."

Reviews questioning the quantity of fuel dispensed

High

Raises concerns about dispensing accuracy and customer trust, suggesting a need for regular calibration checks.

"The "Quantity" Anxiety: Reviews questioning the quantity of fuel dispensed strike at the core of the business's integrity. While often perception-based, failing to address these with visible calibration checks (using the 5-liter standard measure) allows the narrative of "theft" to fester."

ENVIRONMENTAL COMPLIANCE

- Mandatory Stage I & Stage II Vapor Recovery Systems (VRS)
- Strict norms for hazardous waste disposal
- Compliance with Diesel Generator (DG) ban during GRAP (Graded Response Action Plan) for smog control

MISCELLANEOUS INTELLIGENCE

REGULATORY

Unlimited Liability Structure

The proprietorship structure means the owner, Mr. Sudesh Yadav, has unlimited personal liability for operational risks.

FINANCIAL

GST Registration Integrity

Active and Regular GST registration (07AAFFJ4471P1ZU) with PAN indicating 'Personal' (P) confirms proprietorship and suggests consistent financial compliance.

REGULATORY

Related Entity Disambiguation

Identified 'Shree Ganesh Corporation' (Haryana) and 'Jai Shree Ganesh Enterprises' (Delhi) as distinct entities, not linked to the fuel station.

STAFFING

Staffing Vulnerability

Recurrent customer complaints about 'rude staff' and 'unprofessional behavior' indicate potential systemic training deficits, reliance on low-wage/transient labor, and possible non-compliance with labor laws (PF, ESI).

FINANCIAL

Minimum Wage Impact

Higher minimum wages in Delhi (approx. ₹18,000-₹20,000/month) increase operational expenditure (OPEX) compared to neighboring states.

INFRASTRUCTURE

CNG Infrastructure Requirement

24-hour CNG service implies a robust compressor setup (likely 1200 SCMH capacity) to maintain dispensing pressure.

OPERATIONAL

PUC Center Strategic Role

Houses a mandatory PUC checking center, acting as a footfall driver for fuel sales.

FINANCIAL

Land Ownership Implication

Proprietorship and specific Khasra numbers suggest land may be dealer-owned or on long-term private lease, incentivizing throughput.

FUTURE OUTLOOK

RRTS Construction Impact (12-24 months)

Significant immediate threat; potential 30-50% sales volume reduction for 12-24 months due to physical disruption and traffic diversions. Requires active engagement with NCRTC to maintain access.

Electric Mobility Transition (5-10 years)

Existential threat to CNG revenue stream over 5-10 years due to government push for EV adoption in commercial fleets. Need to pivot to an 'Energy Station' model by installing EV Charging Infrastructure (e.g., BPCL E-Drive, Tata Power, Statiq).

Non-Fuel Retail (NFR) Potential (Ongoing)

High potential to develop QSR drive-thrus or convenience stores, leveraging location near wedding venues and highway traffic. Can provide rental income stream resilient to fuel market volatility and EV disruption.

Infrastructure Modernization (Ongoing)

Imperative to modernize infrastructure to compete in a dynamic market and potentially integrate EV charging.
